

HELLENIC ASSOCIATION OF MEDICAL GENETICISTS

Athens, 2nd June 2010

With respect to the efforts undertaken for the legislation of the Genetic Services in Europe:

The Greek Association of Medical Geneticists (GAMG) requests urgently the inclusion of the Medical Laboratory Genetics Specialty recognition in the agenda of the Recognition Committee of the E.U.

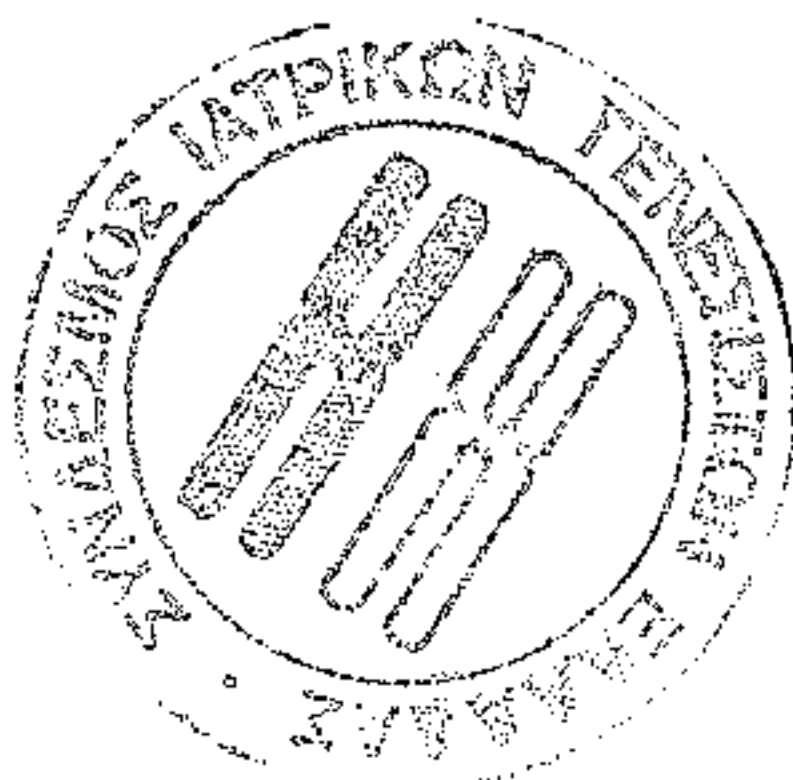

Although we recognize the work done on the Clinical Genetics specialty we CAMG would like to state that Medical Genetics is a multidisciplinary field and therefore Laboratory, Clinical genetics and Genetic counseling should be recognized together. We believe that a multidisciplinary union as ESHG should support the legal recognition of a specialty for all three parties simultaneously through the E.U.

Given the large degree of heterogeneity concerning genetic services across Europe the simultaneous promotion of the three specialties will result in the rationalization of the provision of these services.

Secretary General

Sofia Douzgou, M.D.
